SUMMARY

- 10 years building high-throughput, event-driven systems at Amazon and Fidelity (Java, TypeScript, AWS).
- Tech lead of 6 engineers building Fidelity's enterprise customer-communications platform, unifying outgoing email, paper and SMS into one view (email live at 25M+ events/day); previously led the Guided Experience platform (2M+ users).
- Build AI coding-agent skills (GitHub Copilot, Claude Code) that cut team onboarding to the Guided Experience platform from 2 weeks to 1 day; completed the Applied AI Masterclass (RAG, tool use, agentic loops, evals).

EXPERIENCE

Principal Full Stack Software Engineer · Fidelity Investments · Westlake, TX — Apr 2023 – Present

- Tech lead of a 6-engineer team building an event-driven platform (ActiveMQ Artemis, SQS) that unifies all outbound customer communications across enterprise systems into one view. Email live at 25M+ events/day; paper and SMS in progress. Platform will power a new communication center, fraud detection, and over-communication analysis.
- Led the Guided Experience platform, orchestrating multi-step transaction workflows across workplace and personal investing products for 2M+ users (Angular, RxJS, Java, AWS), including a Micronaut / YugabyteDB progress-tracking microservice.
- Defined and drove the SPA-to-micro-frontend migration on Angular Elements, enabling 4 product teams to deploy independently; cut time-to-market 40%.
- Built GitHub Copilot skills and orchestration agents that automate host-app scaffolding, micro-frontend integration, and mock generation, cutting new-team onboarding from 2 weeks to 1 day.
- Mentored 3 junior developers and converted a QA engineer to developer in 8 months through code reviews and incremental feature ownership.

Software Development Engineer · Amazon · Seattle, WA — Mar 2020 – Mar 2023

- Built and scaled a stateless, server-side rendering service delivering personalized banners, product content, and ads across Amazon's retail site and emails, sustaining ~75K TPS at Prime Day peak (Java, JSP, FreeMarker).
- Built a marketing content management platform (React, Redux, Jest) for creating, scheduling, and publishing content across the retail website and Prime Insider emails.
- Delivered the back-to-school and off-to-college product launches with a partner team using JAX-RS, DynamoDB, and AWS CDK.
- Resolved high-severity production incidents as on-call engineer, sustaining 99.95% uptime through automated monitoring and runbooks.

Application Developer · Client: Williams-Sonoma · Rocklin, CA — Nov 2018 – Mar 2020

- Built pricing and promotion service features (Spring Boot, JAX-RS, SQL) and Lit web components surfacing eligible promotions for SKUs on the retail website.
- Contributed to migrating tax calculation from a homegrown engine to Vertex; stress-tested the pricing service with Gatling to locate bottlenecks and deliver tuning recommendations.

Software Developer · Client: VSP Vision Care · Sacramento, CA — May 2016 – Sep 2018

- Decomposed a legacy Java monolith into Spring Boot microservices and rebuilt the associate-facing frontend as an Angular single-page application.
- Built a Selenium end-to-end test suite for the application, running it in CI to catch regressions before release.

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, SQL
Frontend	React, Redux, Angular, RxJS, Angular Elements, Lit, Micro-frontends
Backend	Spring Boot, Spring WebFlux, Micronaut, NestJS, Node.js, GraphQL, JAX-RS, REST, Microservices
Data & Cloud	PostgreSQL, DynamoDB, SQS, ActiveMQ Artemis, Kafka, AWS (CDK, Lambda, S3, EKS), Docker, Kubernetes, Jenkins
AI & Testing	RAG, tool use, agentic workflows (Temporal), GitHub Copilot, Claude Code · JUnit, Jest, Cypress, TDD, BDD

EDUCATION

M.S. Computer Science
California State University, Sacramento · 2016

B.S. Computer Science
Jawaharlal Nehru Technological University · 2013

CERTIFICATIONS & AWARDS

Applied AI Masterclass · 2026

Associate Android Developer · 2017

2nd Place at Microsoft 24-Hour Hackathon · 2014
